ReturnLens

Every return decision, backed by evidence.

An evidence-backed triage assistant that unifies customer claims, unboxing video footage, and store records for solo online sellers.

CORE ARCHITECTURAL THESIS

**“Models observe.
Code verifies.
Seller authorizes.”**

Zero automated refunds · Zero automated rejections

RETURNLENS SELLER CONSOLE · CASE #RT-8821

Order #ORD-7729 · Studio Wireless · ₹1,499 paid · Delivered 4d ago (Within 7d window)

STORE SPECIFICATION

Matte White (SKU HEAD-WHT-02)

Shippo #SH-9012 verified · Security tag required

OBSERVED EVIDENCE · 00:07

Black Casing (Discrepancy)

Barcode unverified · Exact SKU not verified

COLOR DISCREPANCY: Ordered Matte White; unboxing video shows Black casing.
Automation halted · No automated refund · Prepared 3 resolution choices for seller.

• SELLER GATE (FAIL-CLOSED)
Human confirms every action

Review Evidence & Decide →

One customer claim. Four disconnected sources.

A solo merchant must piece together fragmented records before deciding how to respond.

INCOMING CUSTOMER CLAIM · CHAT TICKET #TK-4412

“I opened the delivery box today and the headphones inside are black, not the white ones I ordered. I want an immediate refund.”

Attached unboxing video (18s MP4) · Order reference ORD-7729 provided by customer

1. Customer Message

Unstructured chat text and unverified unboxing video footage.

2. Shopify Order

Catalog specs: SKU HEAD-WHT-02, Matte White, ₹1,499 paid.

3. Courier Tracking

Shippo scan confirms physical parcel delivery 4 days ago.

4. Store Policy

7-day return policy for unopened or mis-shipped goods.

THE SOLO SELLER'S DILEMMA:

Is this a warehouse packing error, an honest customer mix-up, or an unboxing swap? Blindly refunding destroys profit margins; blindly rejecting destroys customer trust. The merchant needs verified facts to choose the next step.

CORE DEMONSTRATION · STAGED MOCK SCENARIO

The order says white. The video shows black.

ReturnLens pinpoints the visible discrepancy without jumping to unverified conclusions.

STORE SPECIFICATION · SHOPIFY

Studio Wireless Headphones · Matte White (SKU HEAD-WHT-02)

Order #ORD-7729 · ₹1,499 paid · Delivered 4d ago

≠ COLOR DISCREPANCY

OBSERVED EVENCE · VIDEO FRAME 00:07

Black Casing Observed

Color mismatch flagged · Barcode unverified · Exact model unverified

WHAT RETURNLENS DELIVERS TO THE SELLER (ACTIONABLE RESOLUTION OPTIONS):

* Illustrative concept scenario with staged mock evidence. Not live production video footage.

1. Accept warehouse mis-pack

Warehouse staff likely grabbed black inventory by mistake. Issue replacement return label.

2. Request box label photo

Ask customer for a quick photo of the barcode on the outer shipping box to trace parcel origin.

3. Hold for inspection

Approve physical return, but hold refund release until parcel is inspected at warehouse.

Models observe. Code verifies. Seller authorizes.

A structured agent pipeline that investigates, checks policies, and drafts the next step.

1. Collect

VISION & INGESTION

Ingests customer chat, order records, carrier tracking, and extracts cited keyframes.

2. Compare

RULE ENGINE

Cross-checks observed visual traits against catalog truth, delivery date, and 7-day policy.

3. Recommend

PLANNING & DRAFTING

Synthesizes matches, conflicts, or missing evidence into 3 actionable resolution paths.

4. Authorize

SOLO MERCHANT

Seller reviews the evidence pack and clicks one button to confirm the action.

DYNAMIC CLARIFICATION (CASE C):

If video is dark or blurry (<50/255 luminance), agent asks customer for 1 guided re-upload, pauses case in WAITING_FOR_EVIDENCE, and automatically resumes when new footage arrives. Max 1 retry before escalating to seller.

MODELS OBSERVE

Vision and language models transcribe claims, cite keyframe timestamps, and draft replies.

CODE VERIFIES

Deterministic Python code calculates return windows, delivery validity, and refund limits.

SELLER AUTHORIZES

Human seller retains full authority. Zero automated refunds; zero automated customer denials.

Three situations. Three useful next steps.

ReturnLens handles clean claims, flags discrepancies, and guides unclear evidence.

CASE A

Consistent Claim

SITUATION:
Unboxing footage clearly shows cracked headphone headband upon box opening. Within 4-day delivery window.

AGENT BEHAVIOR:
Validates delivery date and visible physical damage; drafts return shipping label for merchant review.

SELLER OUTCOME:
1-click approval to issue return label. Refund remains pending until parcel is scanned at warehouse.

CASE B

Color Discrepancy

SITUATION:
Customer claims defective white headphones, but unboxing video shows black casing.

AGENT BEHAVIOR:
Halts auto-routing; highlights color mismatch; notes barcode is unverified; prepares 3 resolution options.

SELLER OUTCOME:
Seller decides: accept warehouse packing error, ask for outer box photo, or hold return for inspection.

CASE C

Unclear Evidence

SITUATION:
4-second dark, shaky unboxing video (<50/255 brightness score). Product condition cannot be verified.

AGENT BEHAVIOR:
Guides customer with tips to re-film in good light; pauses case; resumes seamlessly on new upload.

SELLER OUTCOME:
Customer gets a fair chance to clarify. If 2nd attempt fails, escalates directly to seller with full history.

A focused 24-hour prototype. Clear scope boundaries.

00–06h
Phase 1: Ingestion & Schema
Mock order/tracking fixtures & case state schema.

06–12h
Phase 2: Vision & Rules
Keyframe extraction & deterministic rule comparisons.

12–18h
Phase 3: Seller Console UI
Interactive side-by-side evidence review console.

18–24h
Phase 4: Walkthrough & QA
End-to-end walkthrough across Cases A, B, and C.

3 TEAM ROLES (MAX 2 DELIVERABLES EACH)

- **Person A · Workflow & Rules:** State machine logic · Case C re-upload loop · Rule checks
- **Person B · Vision & Interface:** Keyframe extractor · Discrepancy viewer · Decision cards
- **Person C · Fixtures & Testing:** Realistic order/courier mock data · 10-test scenario runner

SCOPE DISCIPLINE: SPRINT MUST-DELIVER VS. STRETCH

- **MUST DELIVER (Sprint Core):** Mock order/courier data · Keyframe evidence viewer · 3 core scenarios (A, B, C) · Fail-closed seller console
- **CUT FIRST (Stretch Goals):** Live Shopify/courier API webhooks · Automated payment gateways · Advanced video forensics

“ReturnLens gives solo sellers the clarity of an enterprise returns team, while keeping every final decision in human hands.”
