ReturnLens

Every return decision, backed by evidence.

An evidence-backed triage assistant that connects customer claims, unboxing footage, and store records into a clear decision pack for solo online merchants.

DESIGN PRINCIPLE

“Models observe. Code verifies. Seller authorizes.”

No automated refunds · No automated customer rejections

RETURNLENS SELLER CONSOLE · CASE #RT-8821

Order #ORD-7729 · Studio Wireless · ₹1,499 paid · Delivered 4d ago (Within 7-day window)

STORE SPECIFICATION

Matte White · HEAD-WHT-02

Shippo #SH-9012 verified · Security tag required

OBSERVED EVIDENCE · 00:07

Black Casing Observed

Color mismatch · Barcode & model unverified

Color discrepancy: Ordered Matte White; video shows Black casing. Barcode unverified.
Prepared 3 resolution choices for merchant authorization.

Seller authorizes returns, labels & refunds
No automated refund or denial

Review Evidence & Decide →

One customer claim. Four disconnected sources.

A solo merchant must piece together fragmented records before deciding how to respond.

INCOMING CUSTOMER CLAIM

“I ordered white headphones, but received black. Please refund me.”

Attached: unboxing_video.mp4 (18s)

1. Customer Chat

Claim text and attached unboxing video clip

2. Shopify Order

Matte White (SKU HEAD-WHT-02), ₹1,499 paid

3. Courier Scan

Shippo confirms parcel delivered 4 days ago

4. Store Policy

7-day window for wrong or damaged items

THE SELLER'S QUESTION:

THE SELLER'S QUESTION: Packing mistake, delivery error, or unboxing swap? The seller needs verified facts before deciding to refund, replace, or inspect.

CORE DEMONSTRATION · STAGED CONCEPT SCENARIO

The order says white. The video shows black.

ReturnLens highlights the visible difference without jumping to unverified conclusions.

STORE SPECIFICATION · SHOPIFY

Ordered: White

HEAD-WHT-02 · ₹1,499 paid · Delivered 4d ago

≠ COLOR DISCREPANCY

OBSERVED EVIDENCE · VIDEO FRAME 00:07

Observed: Black

Barcode unverified · Exact model unverified

WHAT RETURNLENS PREPARES FOR THE SELLER:

* Illustrative concept scenario with staged mock evidence.

1. Accept warehouse mis-pack

Issue replacement return label

2. Request box label photo (Recommended)

Drafted reply: “Thanks for the video. Please share the outer-box label so the seller can check the shipment.”

3. Hold for inspection

Inspect returned parcel before refund

Models observe. Code verifies. Seller authorizes.

A structured agent pipeline that investigates, checks policies, and drafts the next step.

1. Collect

VISION & INGESTION

Ingests customer chat, tracking scan, and extracts cited video keyframes.

2. Compare

RULE ENGINE

Cross-checks observed color against catalog specs, delivery date, and 7-day policy.

3. Recommend

PLANNING & DRAFTING

Synthesizes matches and discrepancies into 3 actionable choices and drafts replies.

4. Seller Decides

SOLO MERCHANT

Human merchant reviews the evidence pack and clicks one button to confirm.

DYNAMIC CLARIFICATION (CASE C):

Unclear evidence → Request a close-up photo → Add to same case file → Continue review

If footage is dark or blurry, agent requests 1 close-up photo or box label and continues the same case. Never auto-rejects.

Models observe visual traits · Code checks dates and policy rules · Seller authorizes all actions

Three situations. Three useful next steps.

ReturnLens handles clean claims, flags discrepancies, and guides unclear evidence.

CASE A

Consistent Claim

SITUATION:
Unboxing video shows cracked headband; delivered 4 days ago, within the 7-day return window.

AGENT ACTION:
Validates delivery date and visible physical damage; drafts return shipping label.

SELLER OUTCOME:
1-click approval to issue return label. Refund held until parcel arrives at warehouse.

CASE B

Color Discrepancy

SITUATION:
Customer claims: "I ordered white headphones, but received black."

AGENT ACTION:
Flags color mismatch; notes barcode unverified; drafts 3 resolution choices.

SELLER OUTCOME:
Seller decides: accept mis-pack, request box label photo, or hold for inspection.

CASE C

Unclear Evidence

SITUATION:
Video footage is too dark or blurry to confirm product condition or serial label.

AGENT ACTION:
Requests a clear close-up photo or box label; appends new evidence to same case file.

SELLER OUTCOME:
Customer gets a fair chance to clarify. If 2nd attempt fails, escalates directly to seller.

A focused 24-hour prototype.

00–06h

Phase 1: Ingestion & Schema

Mock order and courier fixtures; case state schema.

06–12h

Phase 2: Vision & Rules

Keyframe extraction and deterministic rule checks.

12–18h

Phase 3: Seller Console UI

Side-by-side evidence review console with drafted replies.

18–24h

Phase 4: Walkthrough & QA

Scenario walkthroughs and checks across Cases A, B, and C.

3 TEAM ROLES

- **Person A · Workflow & Rules:** State machine logic · Clarification loop · Policy checks
- **Person B · Vision & Interface:** Keyframe extractor · Discrepancy view · Merchant console
- **Person C · Fixtures & Testing:** Order/courier mock data · Scenario walkthroughs & checks

SCOPE DISCIPLINE: SPRINT CORE VS. STRETCH

- **SPRINT CORE:** Mock order/courier data · Keyframe evidence viewer · 3 core scenarios · Fail-closed seller console
- **STRETCH GOALS:** Live Shopify/courier APIs · Automated payment gateways · Advanced video forensics

“One clear evidence pack. The seller makes the call.”
