AgentX Hackathon 2026 · Track PS-04

ReturnLens

Every return decision, backed by evidence.

An evidence triage assistant that connects customer claims, unboxing video, order records, and store policy into one clear decision pack for solo merchants.

Models observe. Code verifies. Seller authorizes.

Agent collects info & clarifies · Seller approves returns, labels & refunds

CASE #RT-8821 · NEEDS SELLER DECISION

Order #ORD-7729 · Studio Wireless · ₹1,499 paid · Delivered 4d ago

Ordered: White
SKU: HEAD-WHT-02 · Matte White

Observed: Black
Keyframe 00:07 · Barcode unverified

Color mismatch: Ordered White vs Observed Black · Barcode unverified
Recommended Next Step: Request outer-box label photo

Seller authorizes all consequential actions
No automated refund · No automated rejection

Review Evidence & Decide →

The Merchant's Reality

One claim. Four disconnected sources.

> **“I ordered white headphones, but received black. Please refund me.”**
>
> Attached: unboxing_video.mp4 (18s)

01
Customer Chat
Claim text and unboxing video upload

02
Shopify Order
Matte White (SKU HEAD-WHT-02), ₹1,499 paid

03
Courier Scan
Shippo confirms delivery 4 days ago

04
Store Policy
7-day return window for wrong or damaged items

Packing mistake, delivery error, or unboxing swap? The seller needs verified facts before deciding to refund, replace, or inspect.

Core Evidence Comparison

White ordered. Black received.

ReturnLens highlights the visible discrepancy without jumping to unverified conclusions.

STORE SPECIFICATION · SHOPIFY

Ordered: White

HEAD-WHT-02 · ₹1,499 paid · Delivered 4d ago

≠

OBSERVED EVIDENCE · VIDEO FRAME 00:07

Observed: Black

Barcode unverified · Exact model unverified

1. Accept mis-pack
Issue replacement return label

2. Request label photo
“Please share the outer-box label so we can check your shipment.”

3. Hold for inspection
Inspect returned parcel before refund

* Illustrative scenario with staged mock evidence. Barcode and exact model unverified.

Agent Architecture

From evidence to next step.

A structured pipeline where models observe, code verifies, and the seller approves.

1. Collect

Vision & Ingestion

Ingests customer chat, tracking scan, and extracts cited video keyframes.

→ 2. Compare

Rule Engine

Cross-checks observed color against catalog specs, delivery date, and 7-day policy.

→ 3. Recommend

Planning & Drafting

Synthesizes matches and discrepancies into 3 actionable choices and drafts replies.

→ 4. Seller Decides

Merchant Decision

Merchant reviews the evidence dossier and approves returns, labels, or refunds.

Case C Clarification Loop

Unclear evidence → Request a close-up photo → Add to case file → Continue review

If footage is dark or blurry, agent requests 1 close-up photo or box label and continues the same case. Never auto-rejects.

Prototype Scenarios

Three situations. Clear next steps.

Expected prototype behavior across clean, conflicting, and unclear evidence.

CASE SCENARIO	SITUATION	AGENT RESPONSE	SELLER'S NEXT STEP
Case A Consistent Claim	Unboxing video shows cracked headband; delivered 4 days ago, within the 7-day return window.	Validates delivery date and visible headband crack; drafts return shipping label.	Approve return label. Refund waits for parcel receipt.
Case B Color Discrepancy	Customer claims: “I ordered white headphones, but received black.”	Flags color mismatch; notes barcode unverified; drafts 3 resolution choices.	Choose a resolution or request the box label.
Case C Unclear Evidence	Video footage is too dark or blurry to confirm product condition or serial label.	Requests 1 clear close-up photo or box label; appends new evidence to same case file.	Review added evidence; handle manually if still unclear.

* Planned prototype behavior across core scenarios.

24-Hour Prototype Sprint

A focused 24-hour prototype.

00–06h

Ingestion & Schema

Mock order and courier fixtures; case state schema.

06–12h

Vision & Rules

Keyframe extraction and deterministic policy checks.

12–18h

Seller Console UI

Side-by-side evidence review console with drafted replies.

18–24h

Walkthrough & QA

Scenario walkthroughs and checks across Cases A, B, and C.

Team

A — Workflow, policy checks and clarification.

B — Evidence extraction and seller console.

C — Scenario data and walkthrough checks.

Build first

Mock order and courier data · Keyframe evidence viewer · 3 core scenarios · Fail-closed seller console

Later

Live Shopify and courier APIs · Automated payment gateways · Advanced video forensics

One clear evidence pack. The seller makes the call.
