AgentX Hackathon 2026 · Track PS-04

ReturnLens

Every return decision, backed by evidence.

A support agent for solo sellers that handles order status, returns and refunds—using video evidence to triage disputed claims.

Models observe. Code verifies. Seller authorizes.

CASE #RT-8821 · NEEDS SELLER DECISION

Order #ORD-7729 · Studio Wireless · ₹1,499 paid · Delivered 4d ago

Ordered: White
SKU: HEAD-WHT-02 · Matte White

Observed: Black
Keyframe 00:07 · Barcode unverified

Color mismatch: Ordered White vs Observed Black · Barcode unverified
Recommended Next Step: Request outer-box label photo

Seller approves returns, labels and refunds.
No automated refund or rejection

Review Evidence & Decide →

The Merchant's Reality

One claim. Four disconnected sources.

> **“I ordered white headphones, but received black. Please refund me.”**
>
> Customer video · 18s

01
Customer Chat
Claim text and unboxing video upload

02
Shopify Order
Matte White (SKU HEAD-WHT-02), ₹1,499 paid

03
Courier Scan
Shippo confirms delivery 4 days ago

04
Store Policy
7-day return window for wrong or damaged items

Should I request more evidence, approve a return, or inspect the parcel?

Core Evidence Comparison

White ordered. Black shown.

Order details, video evidence and the next step—in one view.

STORE SPECIFICATION · SHOPIFY

Ordered: White

HEAD-WHT-02 · ₹1,499 paid · Delivered 4d ago

≠

OBSERVED EVIDENCE · VIDEO FRAME 00:07

Observed: Black

Barcode unverified · Exact model unverified

1. Approve return

Create return and prepare label.

2. Request label photo

“Please share the outer-box label so we can check your shipment.”

3. Hold for inspection

Inspect returned parcel before refund

* Staged example.

Agent Architecture (Planned Prototype)

Tool-assisted triage and safety guardrails.

A structured pipeline where models observe, tools fetch, code verifies, and the seller approves.

1. Fetch & Observe

Routine chats get tracking updates; disputed claims fetch mock order and video frames.

→ 2. Verify Rules

Deterministic code checks return window (0 ≤ days ≤ 7) and store policies.

→ 3. Propose & Clarify

Suggests next action; asks customer for 1 close-up photo if evidence is unclear.

→ 4. Seller Approves

Seller authorizes; tool creates return; escalates with summary if unresolved.

PROTOTYPE SAFETY GUARDRAILS & AUDIT LOG

Refund Guardrails

Refunds require seller approval · Limited by store cap and remaining refundable amount

Full Audit Log

Every tool call, seller approval, blocked action and outcome is recorded in audit trail

Planned scenarios

Three situations. Clear next steps.

CASE SCENARIO	SITUATION	AGENT RESPONSE	SELLER'S NEXT STEP
Case A Damage on arrival	Cracked headband; delivery 4d ago (within 7d window).	Checks the delivery date; drafts return shipping label.	Approve return. Refund waits for parcel receipt.
Case B Evidence clarification	White ordered; black shown in unboxing video.	Flags mismatch; drafts label request (max 1 clarification).	Choose resolution or request outer-box photo.
Case C Refund guardrail	Unclear video; requested refund exceeds ₹1,499 remaining.	Blocks excess amount; requests one close-up; logs both actions.	Review evidence; approve only within refund limits.

24-Hour Prototype Sprint

A focused 24-hour prototype.

00–06h

Ingestion & Schema

Mock backend data & shared JSON state schema.

06–12h

Tools & Vision

Real tool execution on mock data & frame extraction.

12–18h

Console & Guardrails

Seller console, refund cap checks & drafted replies.

18–24h

Integration & QA

Final integration and scenario walkthroughs.

Team (Parallel Execution to Shared Schema)

A — Tool execution, policy engine and refund caps.

B — Video frame extraction and visual observations.

C — Seller console, drafted replies and audit view.

D — Mock data fixtures, scenario walkthroughs and QA.

Build first

Real tool calls on mock data · 3 scenario branches · Refund caps & audit log · Seller approval gate

Later

Live store and courier integrations.

One clear evidence pack. The seller makes the call.
